

GT3 Series Loudspeakers

A fusion of
Art & Technology

The GT3 Series Loudspeakers

The GT3 Series loudspeaker range offer an unparalleled level of sophistication and flair and reveal a new dimension in hi-fi design. This landmark design stands out from the crowd and confirms once more that **DESIGN e** is a company of exceptional vision.

At the heart of the GT3 Series loudspeaker development was a desire to provide premium standards and outstanding quality at an accessible price. These beautiful sculptures are a unique fusion of solid wood craftsmanship with the latest composite technology.

DESIGN e have been blazing a trail through the hi-fi world since the 1990's and their influence can be clearly seen in today's marketplace. Once again this innovative company has challenged the conventional "MDF box" approach to loudspeaker design.

This sensational range is the result of a collaboration between some of the most talented designers and engineers in the hi-fi industry. These exceptional creations have been designed to provide a quality experience for the discerning music lover.

DESIGN e offer designs that appeal for their looks, as much as their performance.

This pioneering imperative can be described as **Functional Art** and has been adopted by a multitude of companies aware of the significance of this inspirational design house.

GT3 Series loudspeakers: Design registered

Construction details

The GT3 Series have been designed with performance and quality in mind. Utilising the latest in C.A.D. technology, the designs have been developed to provide a product to be proud of.

Speaker drive units

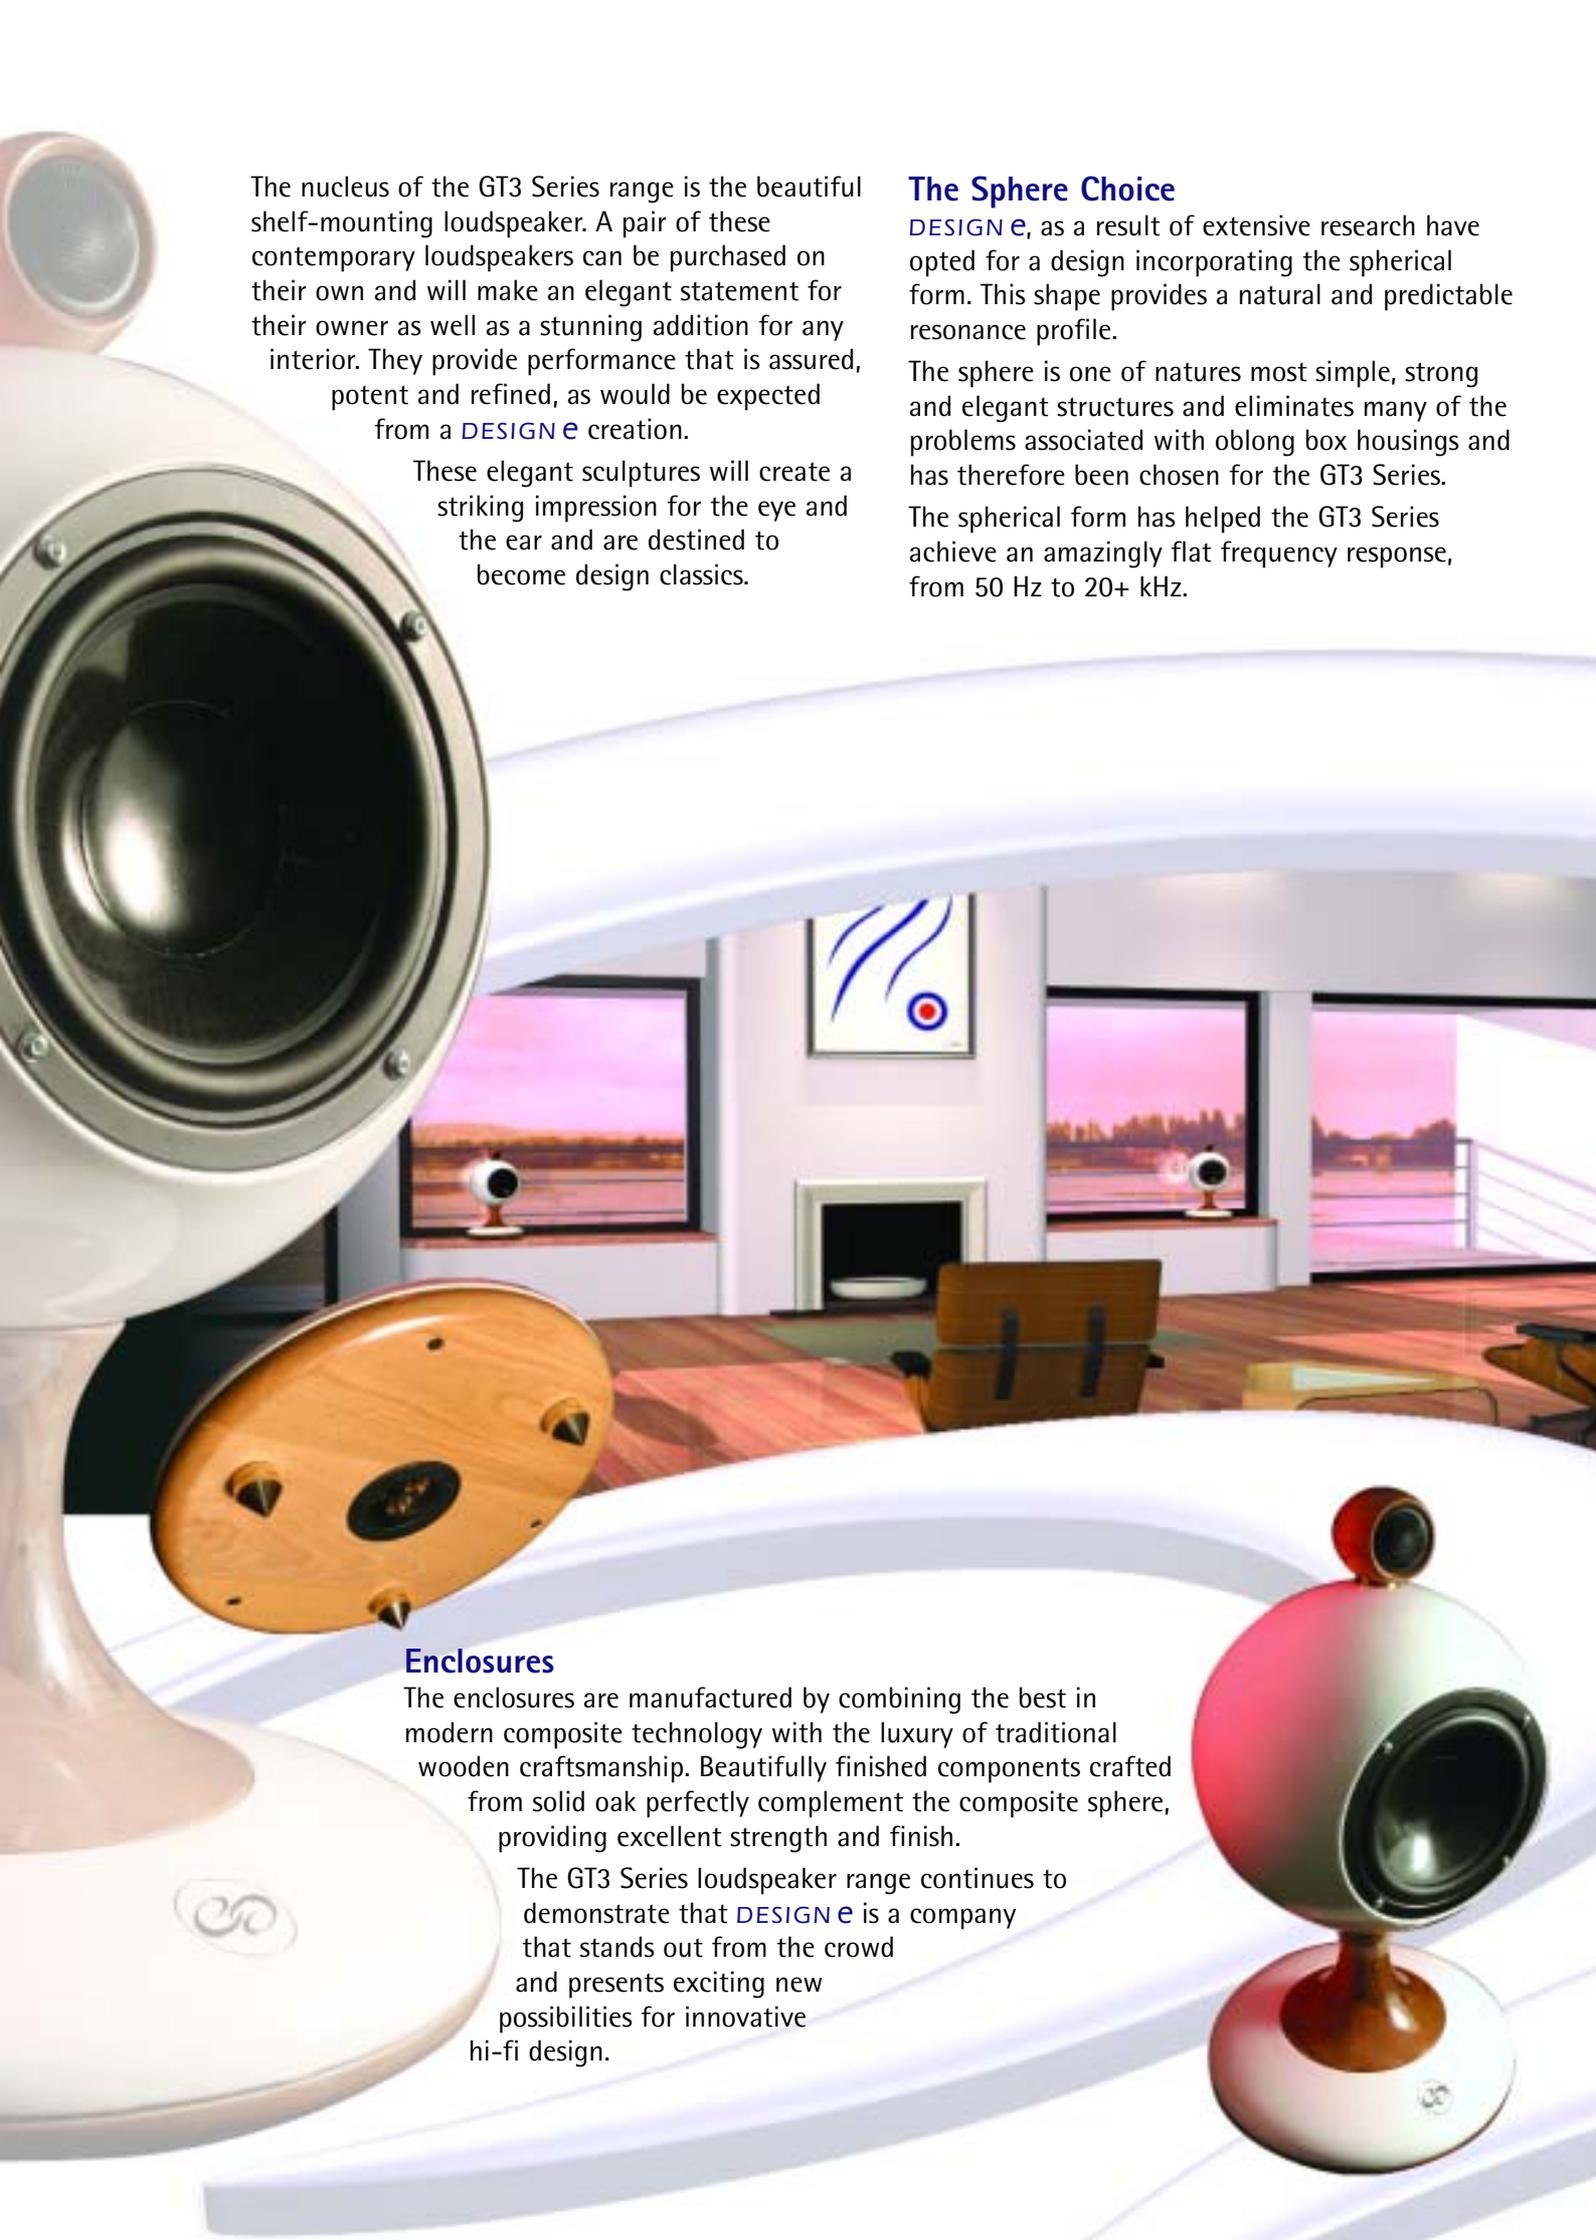

The tweeter selected has been specifically designed for mounting on top of the midrange/bass unit. It has a hand treated cloth dome, copper wire and aluminium former, providing a very linear and wide frequency response.

The unique high quality midrange/bass loudspeaker unit utilises a sandwich cone construction. This unit has been created as a complementary match to the tweeter.

Approximate Mass: 7.0 kg

Amplifier requirements: 25 - 125W
Nominal impedance: 8 Ohms
Frequency response: 50 Hz - 20 kHz
Sensitivity: 87 dB (2.83 V ~ 1m)

The nucleus of the GT3 Series range is the beautiful shelf-mounting loudspeaker. A pair of these contemporary loudspeakers can be purchased on their own and will make an elegant statement for their owner as well as a stunning addition for any interior. They provide performance that is assured, potent and refined, as would be expected from a **DESIGN e** creation.

These elegant sculptures will create a striking impression for the eye and the ear and are destined to become design classics.

The Sphere Choice

DESIGN e, as a result of extensive research have opted for a design incorporating the spherical form. This shape provides a natural and predictable resonance profile.

The sphere is one of nature's most simple, strong and elegant structures and eliminates many of the problems associated with oblong box housings and has therefore been chosen for the GT3 Series.

The spherical form has helped the GT3 Series achieve an amazingly flat frequency response, from 50 Hz to 20+ kHz.

Enclosures

The enclosures are manufactured by combining the best in modern composite technology with the luxury of traditional wooden craftsmanship. Beautifully finished components crafted from solid oak perfectly complement the composite sphere, providing excellent strength and finish.

The GT3 Series loudspeaker range continues to demonstrate that **DESIGN e** is a company that stands out from the crowd and presents exciting new possibilities for innovative hi-fi design.
